

Managed SharePoint

Key Benefits

- Online collaboration
- Complete data control
- Advanced documentation search
- Global project workspace
- Secure document storage
- No capital investment

The Challenge

As companies grow they increasingly encounter issues managing their data. Soon it becomes difficult to keep track of the multiplying documents and their locations, and sharing work files through email becomes cumbersome.

Today's workforce is extremely mobile and spread over many locations, be it different countries, office locations, separate departments or at your home office, making it difficult and time consuming to maintain accurate data control.

The Solution

Microsoft SharePoint is the central information sharing and productivity platform for the Microsoft Office system allowing people, teams and expertise to connect and collaborate.

■ Collaborate

Windows SharePoint Services empowers users to collaborate on documents, tasks, contacts, events and improve project management with shared calendars and issue tracking.

■ Share

SharePoint makes it easy to

launch and maintain intranets, web sites, bulletin boards, picture libraries and schedule events. You can also access critical documents from any web browser, and you can work with them natively in Microsoft Office.

■ Ease of Use

Once your SharePoint site is launched, members can add, edit and delete information using their Web browsers. Automatic hyperlink management maintains links to new material, while templates protect the overall navigational structure, individual page layouts and design elements.

Why adept4?

adept4 has considerable expertise in providing the SharePoint platform as a managed service.

■ Security

24/7 management means that you won't have to worry about the security, integrity and resilience of your portal again.

■ Low Cost & High Service

Guaranteed service levels and predictable monthly costs delivers you a lower cost of ownership without compromising on quality.
