

# Desktop Backup

## Key Benefits

- Secure all your data
- Automated service
- Easily deployed
- Disaster Recovery
- Continuous Data Protection
- Reduced data storage costs
- Full system protection

## The Challenge

Data is your most vital asset, but continuous data protection, coupled with fast effective data recovery, can be costly and time consuming to implement and maintain.

## The Solution

Desktop Backup from adept4 is the most advanced continuous data protection system available. Using an automatic, incremental backup process data is backed up on a continuous basis. Should a users computer face damage or defects its business critical data can easily be recovered with a click of the mouse.

## Works Automatically

Backups run in the background whilst users are working. When the user checks e-mail, the software detects the internet connection and transmits the data to the server. What's more data backup and transmission are completely transparent to the end user, and will not affect network performance.

## Mac and PC compatible

Unlike many data backup and recovery solutions, Desktop Backup from adept4 is suitable for use on a Mac or PC.

## Full System Protection

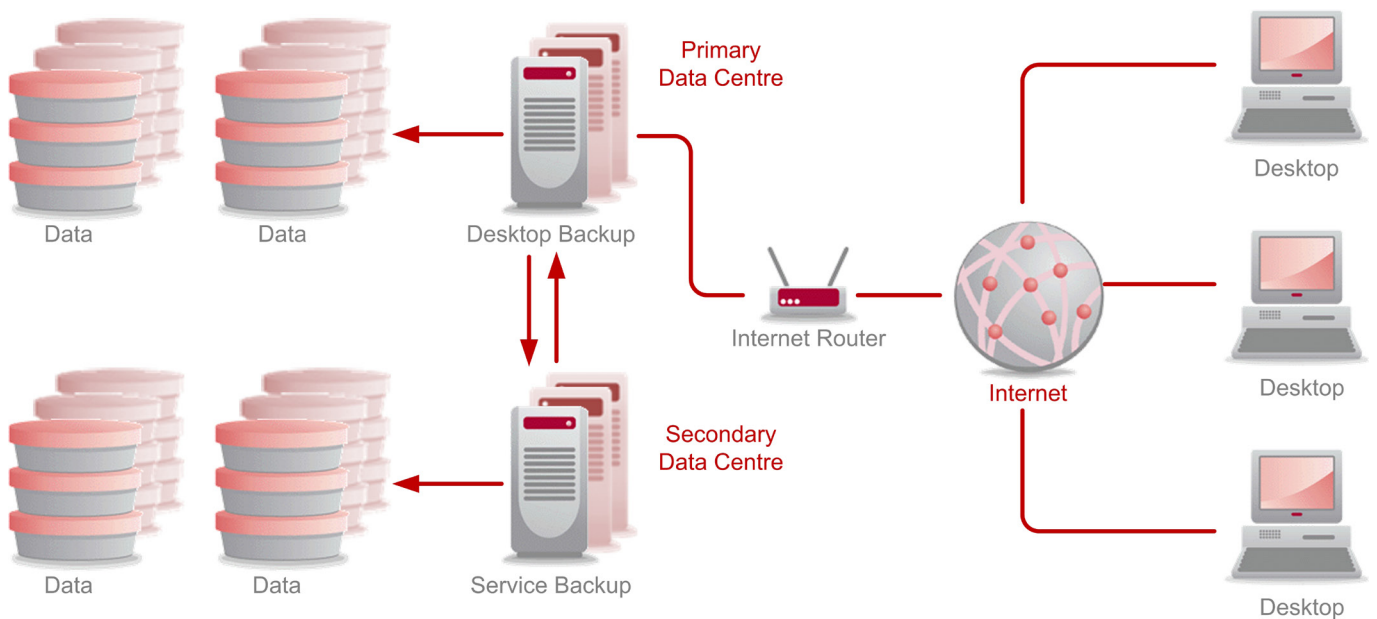

With the option to select from 'My Documents and Desktop Backup' through to a 'Full System Backup' this service doubles up as a comprehensive disaster recovery tool.

Use Desktop Backup to:

- **Recover Data On Demand**  
Data retrieval is a simple point and click operation with no need for technical assistance. Recovery can be actioned remotely regardless of device location or condition.
- **Return to a Checkpoint**  
Use data backup files to generate a bootable CD or DVD and restore a machine to an earlier checkpoint. Checkpoint data includes recovery of user preferences reducing IT restoration time.
- **Reduce Data Storage Costs**  
Patent-pending change detection processes only backup changed data, cutting down costs associated with data storage and data transmission.
- **Continuous Data Protection**  
Traditional data backup and recovery solutions are reliant on scheduled backups. With

## Desktop Backup

desktop backup architecture

continuous data protection you can maximise business data recovery and protection beyond the limitations of a scheduled system.

- **Minimise Nightly Backup**  
Continual Data Protection means there is no need to run nightly backups on your desktop or mobile computers - saving you time.
- **Increase Resilience**  
All data is backed up in secure data centres, with additional on-site resilience. This

guarantees you secure remote access to all your backed up data files.

### Conclusion

Businesses rely totally on the integrity of their data. Why risk it when adept4 can guarantee its safety for about 25p per day?
